

## Project with Jira

Project Name: Bug report for **Shohoz.com**

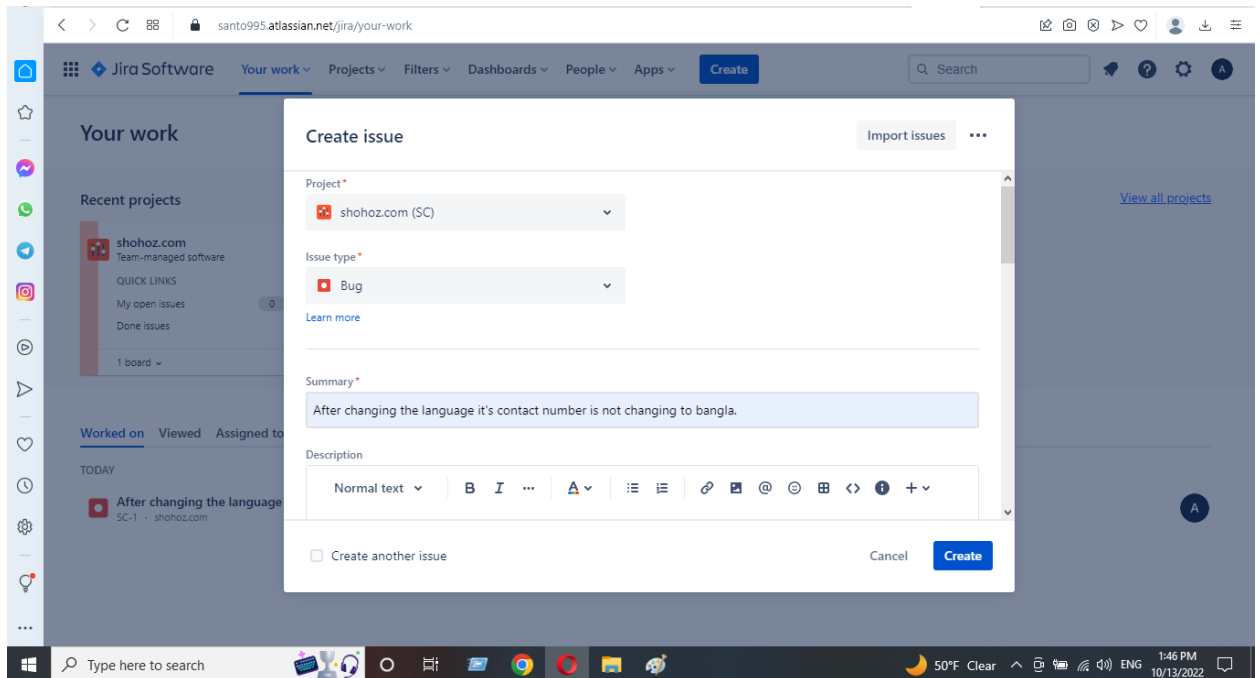

Bug Name: **Language issue**

## Working Procedure:

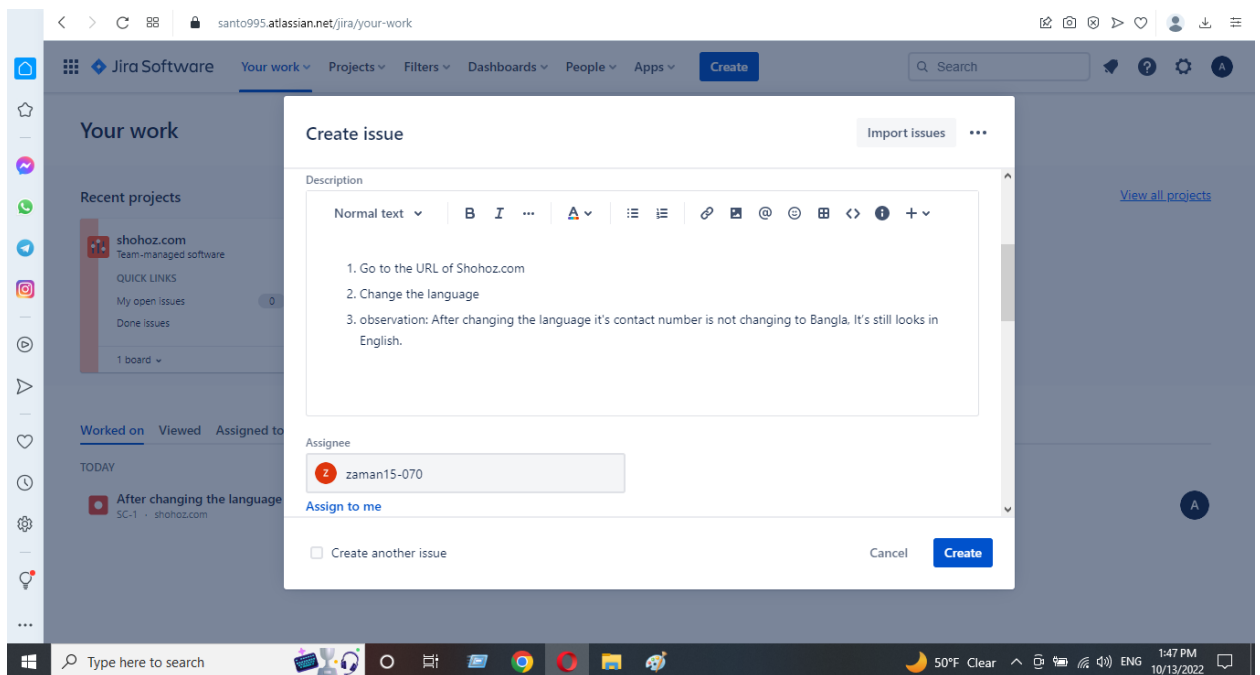

1. First of all, we need to open Jira and setting the project site name and select the developer mail address of my team.

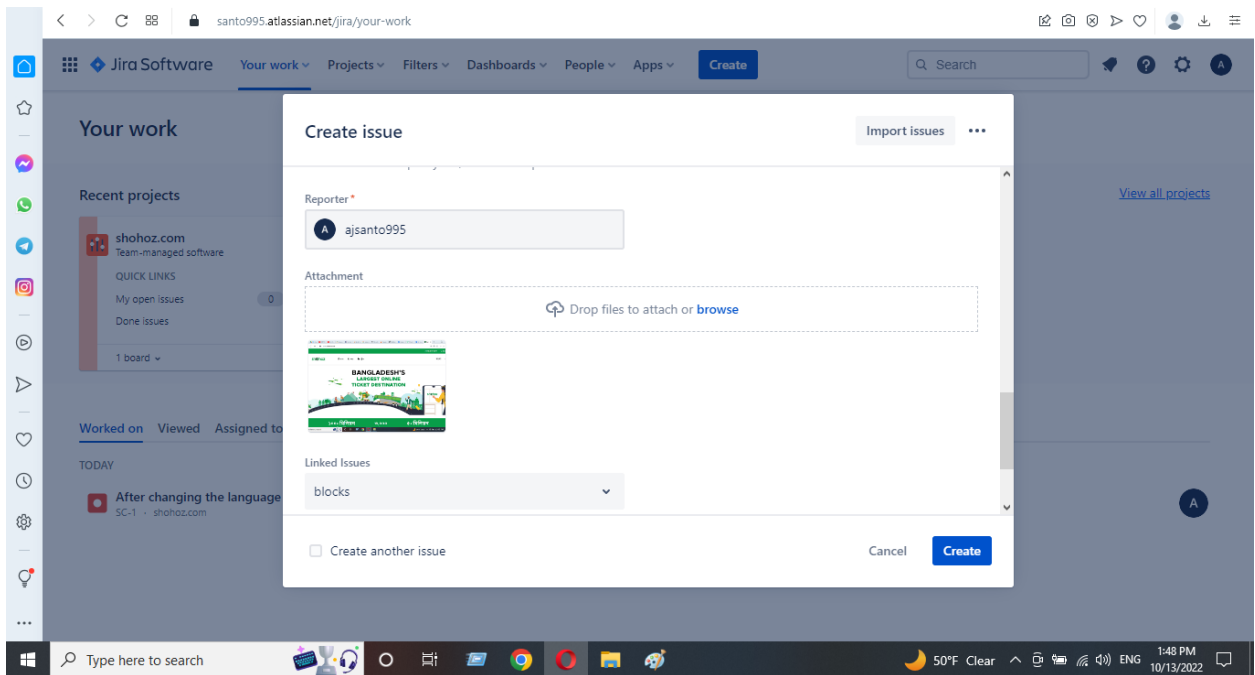

2. Then going to the home page and enter the “create”
3. Then select the “issue” and write the “summary”

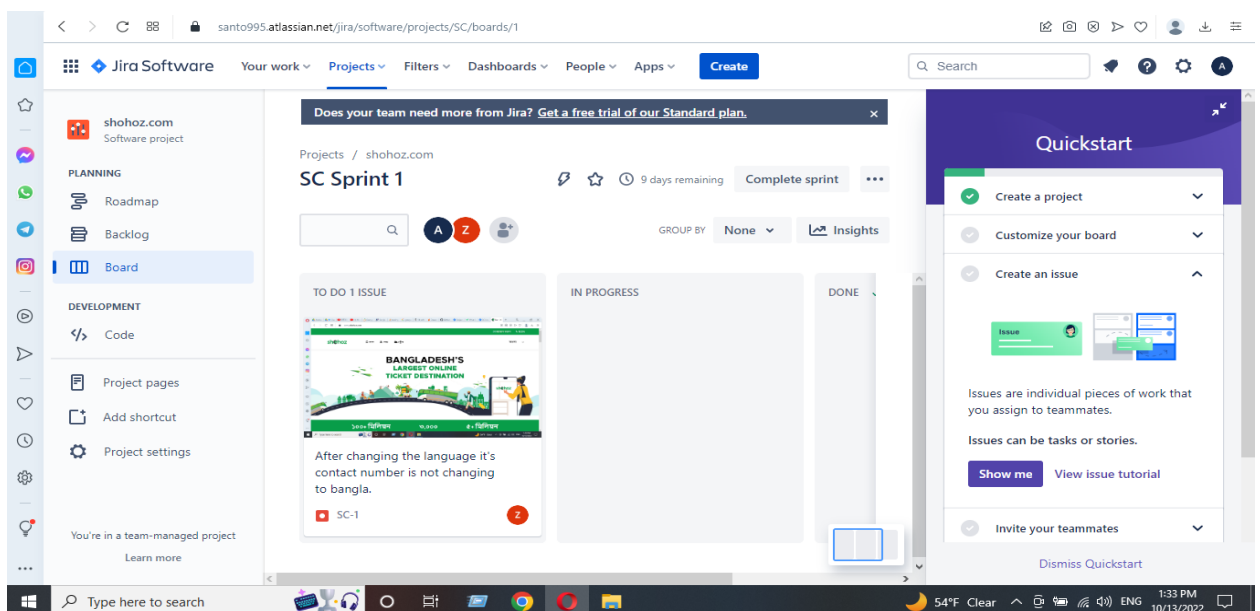

4. Write the description and observation and Assign a developer, select sprint number

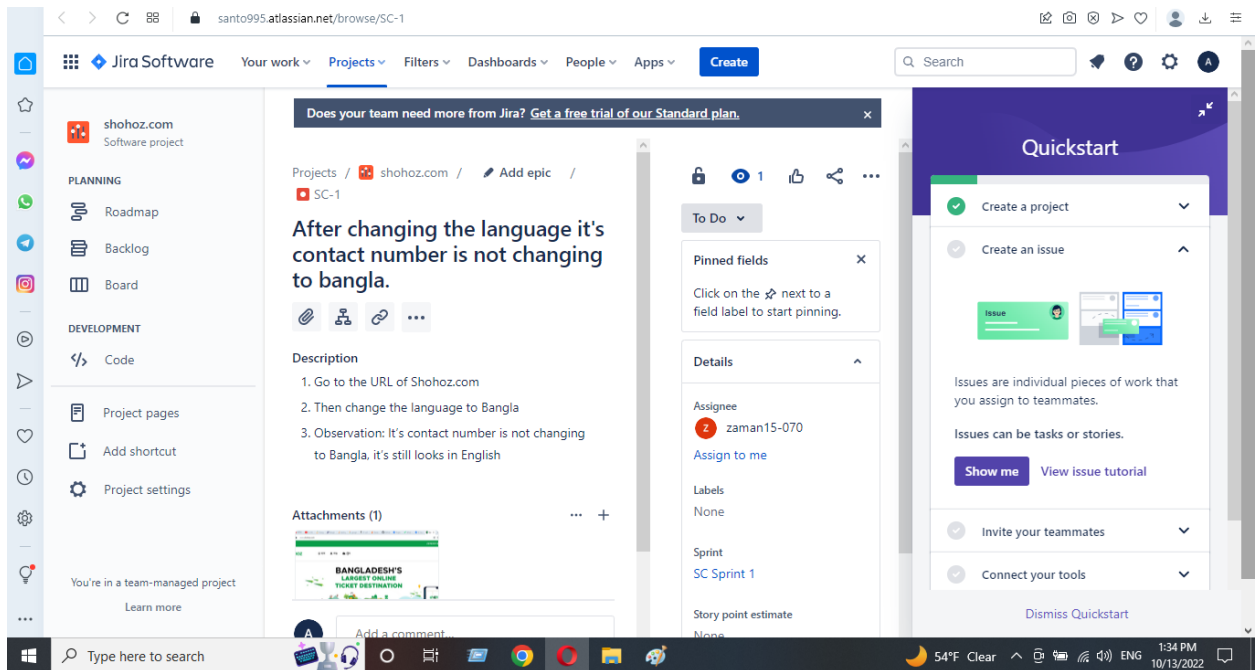

## 5. Upload the issue image and then create

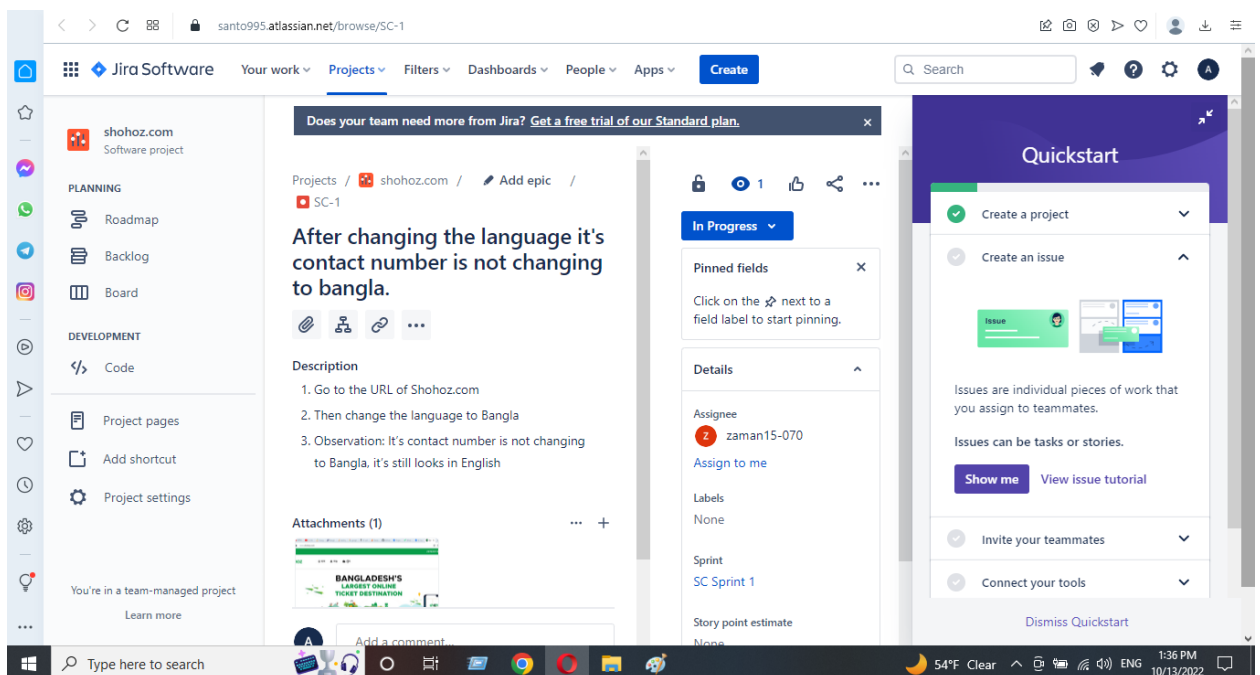

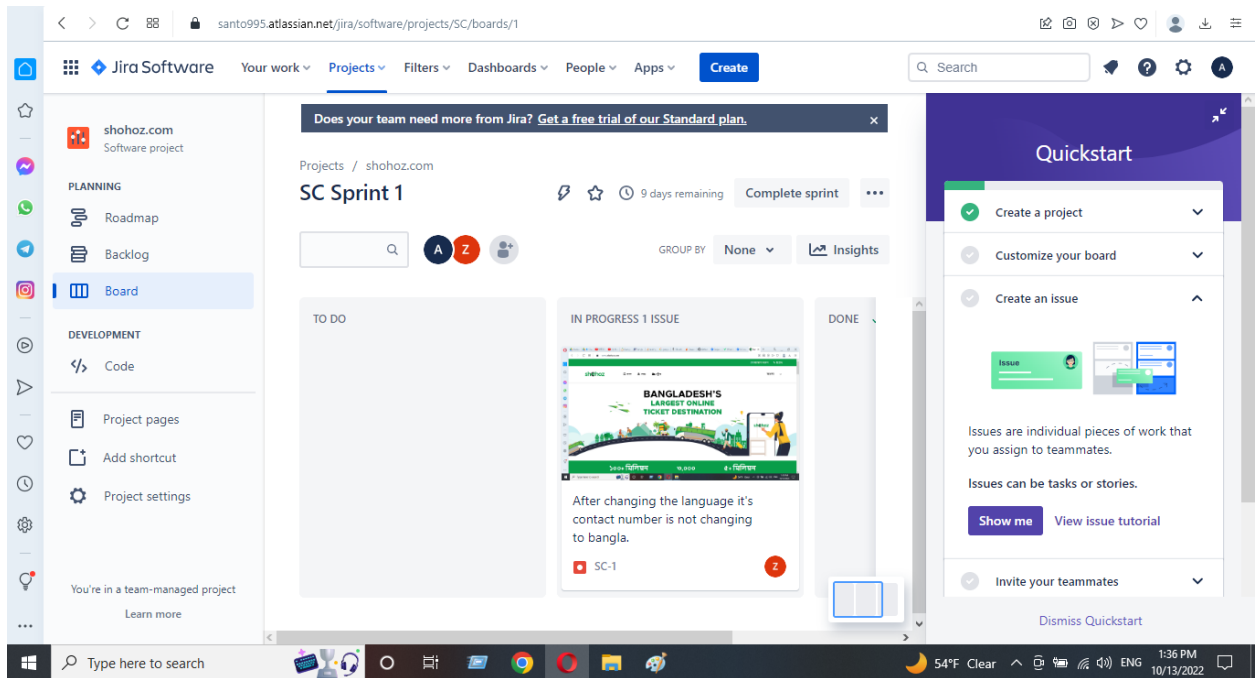

## 6. Then from the developer site he/she receive the issue by mail and going to it “in progress”

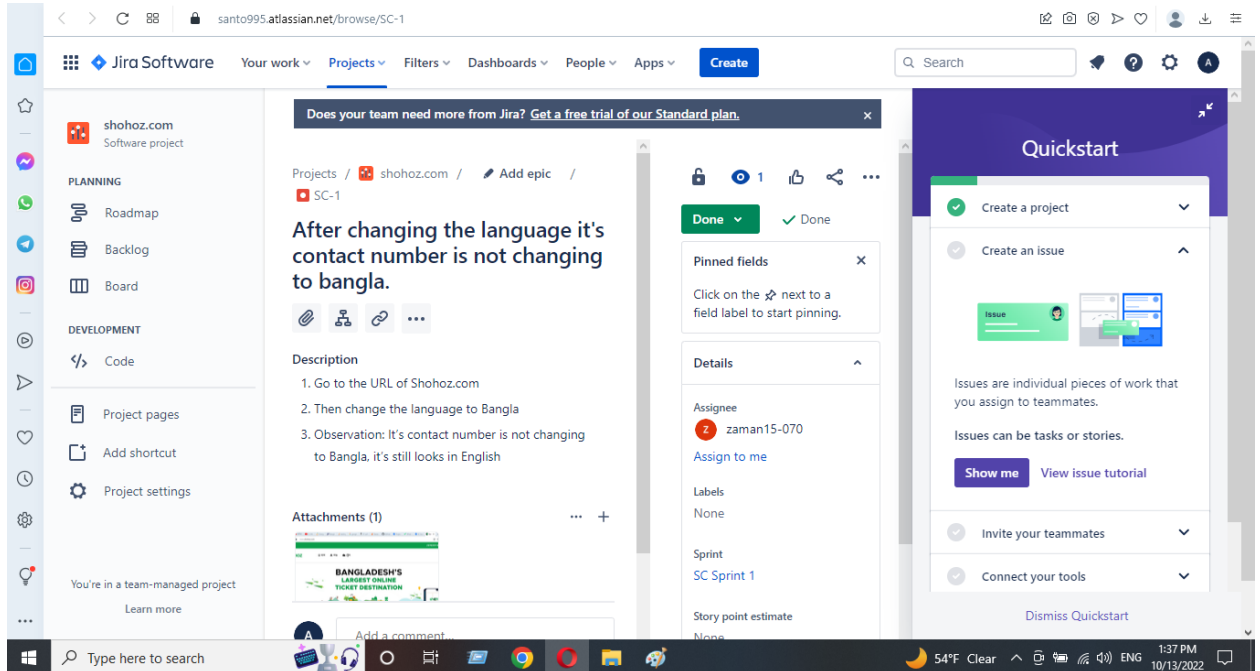

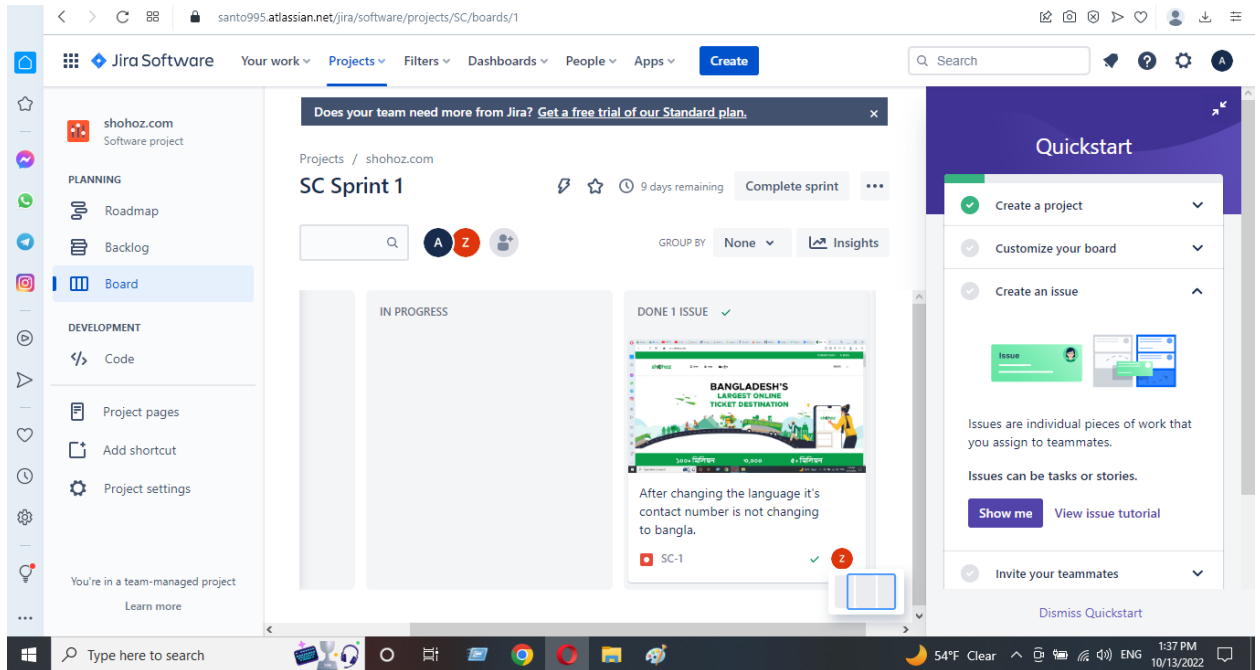

7. In that time reporter can also see the state of the problem

8. Then developer fixed the problem and mark as it “done”

9. Reporter also can see that, and he need to check it again in the site, if it's looks like okay, then all are fine.

# Thank you
